## DETAILED ACTION

### ***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 113 -114 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for ***inhibiting HDAC in subject comprising administering to a subject suffering from cancer or psoriasis and effective amount of compound according to claim 62***, , does not reasonably provide enablement for treatment of all cancers and psoriasis. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to practice the invention commensurate in scope with these claims. The pathways for causing these maladies are too numerous and broadly diverse to reasonably expect that inhibiting a single mechanism would be sufficient to treat said maladies. For example, lung cancer is well known to be caused by smoking. Thus the administering of these compounds to a person who heavily smokes would not reasonably be expected to be useful in treating lung cancer. Moreover, these maladies have no recognized single cause. In fact, the aforementioned diseases are recognized as having many contributing factors, ranging from hereditary considerations, to lifestyle

choices such as the weight and diet of a person. There are many more factors as to why people are inflicted with these diseases.

3. Claim 112 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

The treatment of all proliferative conditions on its face is incredible. It would be an undue burden to one having ordinary skill in the art to determine which compounds are suitable to treat a specific proliferative condition. The broadest definition of "proliferative conditions" is: to grow by rapid production of new parts, cells, buds, or offspring. Thus the claims read on inhibiting life and normal cell growth. It would be an undue burden for an artisan having ordinary skill to determine which disease applicants intend to treat.

Applicant is respectfully requested to cancel this claim or recite of list of enabled proliferative condition in the claims.

***Allowable Subject Matter***

4. Claims 62-110 are allowed.
